Education

Swarthmore College

Expected, May 2027

B.A. in Computer Science, GPA: 3.7

Relevant coursework: Data Structures and Algorithms, Open Source Software, Computer Networks, Computer Graphics, Human Computer Interaction

Extracurriculars: WSRN (Student Radio), Varsity Swimming (DIII Athlete)

Experience

Software Engineer Intern, Full-Stack

Shinkei Systems

El Segundo, CA

June 2026 – Aug 2026

- Led ground-up redesign of a company-wide internal platform for data analysis.
- Deployed full AWS stack utilizing EC2, ECS, RDS, Lambda supporting 100+ employees.
- Built pipeline for 1M+ events a day, reduced ETL processing time by over 95%.

Club President | Sysadmin | Treasurer

Swarthmore College Computer Society

Swarthmore, PA

Sep 2023 – Present

- Managed student-run club focused on developing open-source software for students
- Orchestrated 3 enterprise-grade servers and AI GPU cluster serving **4k+ Daily Active Users**.
- Managed annual budget of ~\$10k a year.

Projects

Shinkei Monitoring Tool | Next.js, Python, TailwindCSS, Postgres, AWS

Aug 2026 – Present

- Internal tool for monitoring 50+ robots near real-time, influencing daily business decisions.
- Built unified data pipeline, aggregating disparate sources into a single source of truth.
- Implemented custom VPC architecture with VPC peering to securely tunnel into downstream database servers.

iOS Application | React Native, Expo, App Store Connect

June 2025 – Present

- Published Budget Buddy to the App Store, generating 2,000+ impressions within two months.
- Reverse engineered GET Mobile to develop a custom WebView integration despite the lack of a public API.

Course Planner | Docker, TypeScript, Next.js, PostgreSQL, Golang

Sep 2024 – June 2025

- Redesigned Swarthmore's course planner from the ground up.
- Streamlined class scheduling for 500+ active students each semester.
- Reduced backend total blocking time by 10x.

Point of Sale System | Android Debug Bridge (ADB)

Sep 2024 – March 2025

- Led a team of 4 to develop a custom POS system for a student-run café improving order throughput by 50%.
- Reverse-engineered legacy printer SDKs, creating a reusable API layer.
- Prototyped a distributed system for multi-point front-of-house service.

Additional

Languages: TypeScript, Python, HTML/CSS; Proficient in C, C++, SQL, Golang, Java
